

Abstract of the Disclosure

This invention relates to a pharmaceutical composition for angiotensin II-mediated diseases, which comprises a compound having angiotensin II antagonistic activity of the formula

wherein  $R^1$  is H or an optionally substituted hydrocarbon residue;  $R^2$  is an optionally esterified carboxyl group;  $R^3$  is a group capable of forming an anion or a group convertible thereinto;  $X$  is a covalent bond between the 2 phenyl rings or a spacer having a chain length of 1 to 2 atoms as the linear moiety between the adjoining phenylene group and phenyl group;  $n$  is 1 or 2; the ring A is a benzene ring having 1 or 2 optional substituents in addition to  $R^2$ ; and  $Y$  is a bond,  $-O-$ ,  $-S(O)^m-$  (wherein  $m$  is 0, 1 or 2) or  $-N(R^4)-$  (wherein  $R^4$  is H or an optionally substituted alkyl group), or a pharmaceutically acceptable salt thereof in combination with a compound having diuretic activity or a compound having calcium antagonistic activity.
